

GIVE YOUR PLANTS A HEALTHY STRESS-FREE HOME!

PowerFeed PRO SERIES Pots & Planters Indoor & Outdoor helps to reduce the stresses of pot life.

Plants in pots sometimes have a harsher environment than those in the ground. They can't send their roots out into the soil looking for nutrients and water. They are sometimes placed in a position that may not suit them but suits the decor. Areas with low light, a draft, air conditioner, heater or too much sun.

PowerFeed PRO SERIES Pots & Planters Indoor & Outdoor is a dynamic fertiliser and soil conditioner boosted with fish, seaweed and liquid compost. It is a fast-acting liquid that can be applied to the soil or foliage of any plant, indoors and out.

The premium blend of nutrients, trace elements and amino acids helps to promote lush, healthy foliage and stimulate flowering and fruiting.

Boosted with added seaweed, it helps improve the root system and reduces stress from heat, drought, frost, pests, disease and low light.

The highly active liquid compost conditions the potting mix or soil, improving soil health and plant nutrient uptake.

For a general application apply 50mL of concentrate per 9 litres of water (standard watering can) every 1-2 weeks during the growing season, less often in winter. Always apply as part of your watering regime and check the pot first to see if it needs a drink.

Note: It's not recommended to be applied on days that may exceed 25 degrees.

PowerFeed PRO Series Pots & Planters 1.2 litres is available from Bunnings for \$13.85.
