Looking after your plants
above and below the ground:

PowerFeed with Troforte has two specialised formulas for all your plants in the garden – **All Purpose** including **Natives** and **Flowers Fruit & Citrus**. So every time you use **PowerFeed with Troforte** you are not just feeding your plants you are continuing to improve your soil and that's the secret to a beautiful, brighter and healthier garden!

Feeding your plants:

PowerFeed with Troforte is an organically enriched granular plant food that delivers a balance of slow and quick release nutrients to plants. It contains essential nitrogen(N), phosphorous(P) and potassium(K) PLUS iron, magnesium, calcium and trace elements to promote healthy growth, stimulate flowering and fruiting, so you get bigger, brighter blooms and tastier fruit and citrus. But it is more than just a fertiliser.

Taking care of your soil:

You can't see them, but the granules are coated with literally millions of good microbes, which come to life when they come into contact with water. So when you use **PowerFeed with Troforte** you're also adding over 24 strains of beneficial Australian microbes to the soil, which are essential for keeping your soils and plants happy.

Why are microbes important?

Microbes do all sorts of things in the garden to improve the health of our soils and plants like decomposing organic matter, improve soil structure and assist plants with nutrient uptake.

How to use it:

- It's effective for up to 3 months and easy to apply.
1. Simply sprinkle it around your plants.
 2. Mix into the top soil and water it in to get the microbes working in the soil.

TIP: Just avoid putting the granules too close to the stem or trunk.
