

BRING YOUR POTTING MIX TO LIFE!

Seasol Potting Mix Booster brings new and existing potting mix to life with the addition of beneficial soil microbes.

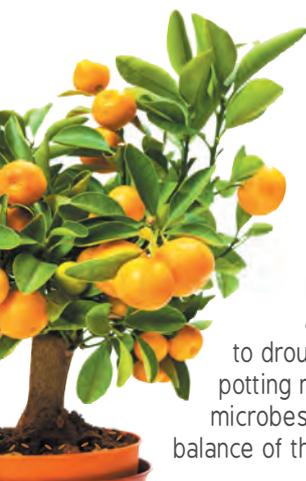

Seasol Potting Mix Booster is an effective and efficient source of nutrients and probiotics for a plant's root system, which can reinforce the potting mix structure and healthy plant growth.

Boosted with an ideal balance of nutrients and energy for beneficial soil microbes, it can help enhance the plant's natural defence mechanism.

Typical Analysis:

Nitrogen(N) 4.0%, Phosphorus(P) 1.4%, Potassium(K) 1.1%

It provides a better environment for beneficial soil microbes in the protective coat, allowing them to multiply and gain strength using minerals as a nutrient source. The microbes can help to prevent pests and disease by assisting the retention of important nutrients in the potting mix.

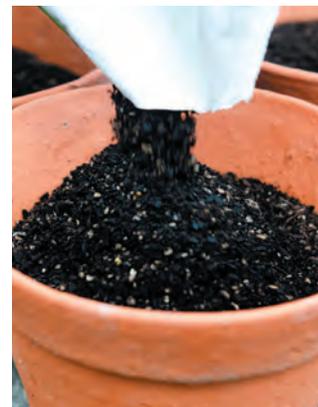

Existing potting mix: Over time, older potting mix can become worn out, microbes may die and the mix can become lifeless, affecting the health of plants. **Seasol Potting Mix Booster** restores the life of tired potting mix by bringing the beneficial microbe population back to the mix.

It also helps improve aeration and water absorption, making plants more resilient to drought. Simply mix it into the top 2cm of the potting mix. Water in thoroughly to activate those microbes and natural minerals to restore the natural balance of the mix.

New potting mix: New mixes start to break down after a couple of weeks due to the lack of good microbes in the soil. **Seasol Potting Mix Booster** helps to keep the mix alive by adding beneficial microbes and natural minerals. These microbes help plants to flourish by boosting the root system and promoting strong, healthy growth.

To help maintain the life of potting mix from the start, simply mix it into the potting mix before planting or incorporate it into the backfill soil when planting.

Generally, **Seasol Potting Mix Booster** can be reapplied to potting mix every 3 to 4 months or as needed.

Seasol Potting Mix Booster is available from Bunnings in a 500 gram container for \$5.49. Each container will treat up to 200 litres of potting mix.
