

PRODUCT INFORMATION

Seasol Biochar with Zeolite

Seasol Biochar with Zeolite brings soil back to life with a dynamic mix of Biochar, Seasol, Zeolite and Paramagnetic rock (rock minerals).

INSTRUCTIONS FOR USE

Seasol Biochar with Zeolite improves the soil structure by increasing fungi and microbial activity.

Biochar is a natural way of boosting organic matter and carbon content in the soil. It increases the water holding capacity of soil and nutrient availability to improve soil and plant health.

Zeolite is an organic mineral additive that attracts and retains nutrients, releasing them when the plant needs it, preventing soil nutrient leaching and assisting drainage.

Seasol improves overall plant health, stimulates the root system and reduces stress from heat, drought, frost, pests and diseases.

DIRECTIONS FOR USE

Seasol Biochar with Zeolite is ideal for use on potted plants (both indoors and outdoors), seedlings, at transplanting and planting, on established gardens, and on new and established lawns. It can also be applied as a top dressing for lawns and garden beds at any time of the year.

Generally, apply it every 6 to 8 weeks or as needed. For established gardens, apply 100 grams per square metre or follow the application table below for more specific rates.

Mix into the topsoil and water in thoroughly after application.

PLANT TYPE	APPLICATION 1 teaspoon = 5 grams	FREQUENCY
Indoor/Outdoor 15cm pot	40 grams	Every 6 to 8 weeks
Indoor/Outdoor 20cm pot	50 grams	Every 6 to 8 weeks
Indoor/Outdoor 25cm pot	60 grams	Every 6 to 8 weeks
Indoor/Outdoor 30cm pot	60 grams	Every 6 to 8 weeks
Transplanting and planting	50 grams	Prior to planting into the planting hole
Established Garden	100 grams per m ²	Every 6 to 8 weeks
New and Established Lawn	140 grams per m ²	Every 6 to 8 weeks

Seasol Biochar with Zeolite is available in a 3.5 litre tub from Bunnings to meet every gardener's needs.

Safe on all soils and plants to help boost garden health

The total soil improver rejuvenates soils, promotes microbial activity and increases soil fertility

Boosts the soil structure to improve water holding capacity, drought resistance & nutrient retention

Promotes overall plant health to help stimulate the root system and reduce environmental stresses

USAGE TIPS

Seasol Biochar with Zeolite is the perfect partner for any garden or soil project applied throughout the year.

- ✓ Apply **Seasol Biochar with Zeolite** regularly to established gardens to improve soil fertility.
- ✓ Apply to the base of the hole and backfill soil when planting. Water it in with **Seasol** to aid plant establishment.
- ✓ Apply to the soil before laying lawn turf or sowing seed. When watering, ensure water is going down into the soil. If it's pooling on top or running off apply **Seasol Super Soil Wetter & Conditioner**.
- ✓ On warm days apply it in the cool of the day - early morning or late evening.
- ✓ It is not recommended to apply when temperatures are above 25°C.
