

PRODUCT INFORMATION

Seasol Seed Raising & Cutting Potting Mix

Seasol Seed Raising & Cutting Potting Mix is a premium potting mix specially formulated for seed germination and plant propagation.

It has everything in the bag to take the guesswork out of germinating seeds and propagating plants from cuttings.

INSTRUCTIONS FOR USE

Seasol Seed Raising & Cutting Potting Mix is safe for most seeds and plant cuttings. It contains the highest quality raw ingredients, **Seasol GOLD**, balanced nutrients and trace elements and a wetting agent to ensure plants get a great start to life.

How to Use - Seed Germination

It's easy to use. Follow these simple steps for best results:

1. Take a seed raising tray and fill it with **Seasol Seed Raising & Cutting Potting Mix** about 15mm below the rim of the tray. Press firmly and water gently. Allow to drain.
2. Either scatter seeds across the mix surface or place seeds individually at even spacings. Plant large seeds individually, and smaller seeds in a group of 2 or 3. Press seeds lightly into the soil.
3. Sprinkle a light layer of **Seasol Seed Raising & Cutting Potting Mix** (up to 5mm) over the seeds. Avoid a thick layer of mix as this will reduce germination rates.
4. Water in gently with **Seasol** and let drain.
5. Place in a well-lit position away from direct sun. It is important germinating seeds receive natural light.

How to Use - Plant Cuttings

Hygiene is particularly important when growing cuttings. Wash all pots before adding potting mix and plant cuttings.

1. Place **Seasol Seed Raising & Cutting Potting Mix** in individual pots about 2cm from the top of the container. Press down firmly.
2. Take plant cuttings. The size of cuttings will vary depending on the plant species. For greater success take smaller cuttings.
3. Use hormone powder or gel to assist with growing success.
4. Place cutting in the mix, ensuring a node is below the mix level.
5. Water in well with **Seasol** and let drain.
6. Cover with a clear plastic bag or place in a greenhouse environment. Cuttings require high humidity, adequate air circulation and protection from direct sunlight.
7. Monitor mix moisture levels and water as required.

Seasol Seed Raising & Cutting Potting Mix is available from Bunnings in a 10 litre bag for every gardener's needs.

Safe on all plants, it's rich in organic matter and compost plus a wetting agent to aid plant development

Treated with **Seasol GOLD** to help improve seed germination & promote strong root growth

Slow release balanced nutrients and trace elements for robust growth without burning

A wetting agent helps water get to the root system, ensuring plant roots stay moist

USAGE TIPS

Seasol Seed Raising & Cutting Potting Mix is the perfect partner to germinate seeds or propagate plant cuttings.

- ✓ Check seed packet directions to ensure seeds are sowing to the right depth. Seed germination times may vary depending on climate conditions.
- ✓ Ensure **Seasol Seed Raising & Cutting Potting Mix** is always kept moist, too wet or dry and seeds will not germinate.
- ✓ Place seeds in a warm position. If it's cold leave them indoors by a window or use a heating pad.
- ✓ Ensure cuttings are spaced at an even distance in the pot. Too many cuttings and there is not enough room for root growth.
- ✓ Once the roots develop, transplant cuttings into **Seasol Advanced Potting Mix**.
