

PRODUCT INFORMATION

Seasol Super Soil Wetter & Conditioner

Seasol Super Soil Wetter & Conditioner is a long-lasting, aquatic safe wetting agent boosted with Seasol seaweed concentrate and humic soil conditioners.

Not only does it allow water to go down to where it's needed, the plant's root system, it also improves soil structure, which increase worm and microbial activity.

INSTRUCTIONS FOR USE

Seasol Super Soil Wetter & Conditioner is a fast-acting soil wetter and conditioner that goes to work immediately when applied to the soil.

For a maintenance application use it every 3 to 6 months, or for extremely poor soils, apply every 2 weeks or whenever needed. It can be applied as a concentrate via watering can application or use the hose-on pack.

APPLICATION DIRECTIONS

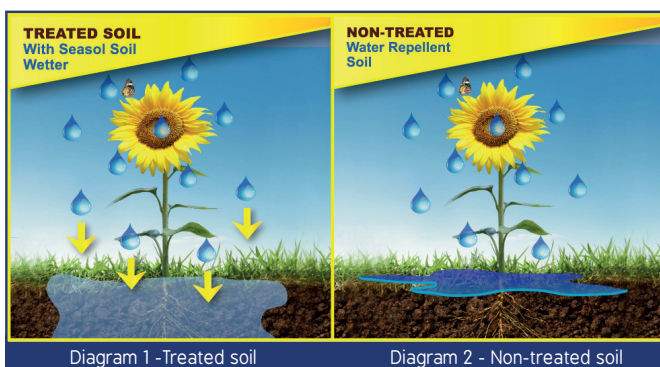

Concentrate

To use the concentrate, generally mix 50mL of **Seasol Super Soil Wetter & Conditioner** per 9 litre of water (standard watering can). Each 9 litre watering can application treats up to 2 to 4 square metres of soil. For extremely poor soils use 100mL of concentrate per 9 litres of water (standard watering can).

Hose-On

The hose-on pack is ready to use. Simply shake the container, push the yellow straw included in the pack firmly into the underside of the spray nozzle. Attach to the hose, turn on the tap, lift the yellow tab and spray your garden or lawn. Each 2 litre hose-on treats up to 100 square metres of garden in around 10 minutes.

To refill the 2 litre hose-on pack add 1 litre of concentrate and top up with 1 litre of water.

Seasol Super Soil Wetter & Conditioner is available from Bunnings in a range of sizes to meet every gardener's needs.

Increases the wettability of hard to wet soils, allowing water to the root zone

Increases watering efficiency and minimises run-off and water wastage

Revitalises soil health, improving moisture and nutrient retention

Promotes overall garden health and strong root systems

USAGE TIPS

It's the perfect partner for any soil project applied whenever it is needed throughout the year.

- ✓ After application, ensure the mixture is washed off the plant foliage to avoid burning it.
- ✓ Apply water to the treated soil after application to ensure that it is going down into the soil. Check out the treated and non-treated soil image (diagram 1) for expected results.
- ✓ In summer apply early morning or early evening before the heat of the day.
- ✓ Check the soil underneath the eaves of the house, as this area may be dry as it gets very little moisture.
- ✓ Due to the natural ingredients in the product avoid contact with porous surfaces. If contact is made, please wash off immediately with water.
